# SEM-I

LINEAR ALGEBRA AND	MULTIVARIABLE CALCULUS
Code:23MA1101	Credits:3
Instruction : 3 periods	Sessional Marks:40
End Exam : 3 Hours	End Exam Marks:60

**Prerequisites:** Matrices, Differentiation, Integration and Functions.

# **Course Objectives:**

To provide the students with sufficient knowledge in calculus and matrix algebra, this can be used in their respective fields.

Course Outcomes: By the end of the course, students will be able to

1.	Apply elementary transformations to reduce the matrix into the echelon form and normal form to determine its rank and interpret the various solutions of system of linear equations.
2.	Identify the special properties of a matrix such as the eigen value, eigen vector, employ orthogonal transformations to express the matrix into diagonal form, quadratic form and canonical form.
3.	Equip themselves familiar with the functions of several variables.
4.	Evaluate double and triple integrals techniques over a region in two dimensional and three dimensional geometry.
5.	Express the given function in terms of sine and cosine.

# **CO-PO – PSO Mapping:**

CO		РО										PSO		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	3	2	1	1							1	2		
CO2	3	2	1	1							1	2		
CO3	3	2	1	1							1	2		
CO4	3	2	1	1							1	2		
CO5	3	2	1	1							1	2		

Correlation levels

1: Slight (Low) 2: Moderate (Medium)

dium) 3: Substantial (High)

#### UNIT I

**Linear Equations :** Rank of matrix - Normal form of a matrix - PAQ form - Gauss Jordan method of finding the inverse - Consistency of linear system of equations. **Sections: 2.7 and 2.10.** 

### UNIT II

Linear transformations and Quadratic forms : Eigen values - Eigen vectors - Properties of eigen values (without proofs) - Cayley Hamilton theorem (without proof) - Reduction of quadratic form to canonical form - Nature of the Quadratic form. Sections: 2.13, 2.14, 2.15, 2.17 and 2.18.

# UNIT III

**Multivariable Calculus :** Total derivatives - Chain rule - Change of variables - Jacobians - Taylor's series expansion of two variable function - Maxima and minima of functions of two variables - Method of Lagrange's multipliers.

Sections: 5.5, 5.6, 5.7, 5.9, 5.11 and 5.12.

# UNIT IV

**Multiple Integrals :** Double integrals - Change of order of integration - Double integration in polar coordinates - Areas enclosed by plane curves - Triple integrals - Volumes of solids (by using double and triple integrals).

Sections: 7.1, 7.2, 7.3, 7.4, 7.5 and 7.6.

# UNIT V

**Fourier Series :** Introduction - Euler's formulae (without proof) - Conditions for a Fourier expansion - Functions having points of discontinuity - Change of interval - Even and odd functions - Half range series.

Sections: 10.1, 10.2, 10.3, 10.4, 10.5, 10.6 and 10.7.

# **TEXT BOOKS:**

1. B. S. Grewal, Higher Engineering Mathematics, 44/e, Khanna Publishers, 2017.

COMMUNICATIVE ENGLISH							
CODE: 23EN2101	Credits: 3						
Instruction : 3 Periods	Sessional Marks : 40						
End Exam : 3 Hours	End Exam Marks : 60						

#### **Prerequisites:** Basic English grammar

#### **Course Objectives:**

- 1. To develop awareness about the importance of LSRW skills
- 2. To implement verbal and nonverbal cues properly in their career and personal life
- 3. To prepare the students impress everyone with their effective communication skills
- 4. To familiarize the students with latest terminology and jargon.
- 5. To train them to attempt various vocabulary tests to get employment.

#### **Course Outcomes:**

1.	Comprehend LSRW skills and various linguistic aspects of multicultural milieu.(L2)
2.	Acquire verbal and nonverbal Communication skills through varied individual and team
	activities. (L3)
3.	Apply proper vocabulary and appropriate grammar to draft different types of writings
	collectively and separately for effective professional and personal communication. (L3)
4.	Analyze and relate advanced terminology in conceptual conversations, writings and in
	pronunciation. (L4)
5.	Distinguish and practice several kinds of vocabulary tests for better employability with
	competence. (L4)

2: Moderate (Medium)

3: Substantial (High)

#### UNIT I

Listening: Motivational Speech (Martin Luther King, Jr. Dr. Abdul Kalam, Sundar Pitchai) Speaking: Self Introduction – Introducing others Reading: Motivational Speech or Essays (H G Wells, Stephen Hawking) Writing: Paragraph Writing - Letter Writing – Profile Building Grammar: Types of Sentences – Assertive, Interrogative, Imperative and Exclamatory - Phrases & Clauses - Verb Forms Vocabulary: Root words – Foreign words and Phrases CO1

#### UNIT II

Listening: TED Talks - Can global food companies make the shift to regenerative agriculture? Speaking: Basics of Communication - Verbal, Nonverbal - Oral talk on selected topics (Women empowerment and gender issues) – Extempore Reading: Newspaper reading Writing: Written Communication – Essay Writing – Assertive essays Grammar: Tenses - Agreement: Subject-verb, Noun-pronoun – Articles – Prepositions Vocabulary: One-word Substitutes – Word Associations – Portmanteau Words CO2

#### UNIT III

Listening: Poems – Sonnets and Haikus
Speaking: Presenting point of view on current affairs
Reading: Editorials reading
Writing: Writing structured, analytical and argumentative essays on general topics
Grammar: Active & Passive Voice, Use of Passive Verbs in Academic Writing - Discourse
Markers or Transition Words
Vocabulary: Modifiers and Misplaced Modifiers–Academic words– Synonyms–Antonyms CO3

#### **UNIT IV**

Listening: Role-plays Speaking: Debate Reading: Skimming and Scanning - Failure to Success Stories (KFC, J K Rowling, Walt Disney) Writing: Summary Grammar: Direct and Indirect Speech – Degrees of Comparison Vocabulary: Homonyms & Homophones – Collocations – Etymology CO4 UNIT V 10 Periods Listening: News Bulletins- Recycle for Life: Karaikal's success in battling waste Speaking: Mock Press, Floor Crossing Reading: The role of Social Media analytics in new-age Digital Market-Writing: Resume Writing – Dialogue Writing Grammar: Quantifiers, Prescribed Phrases – Correction of Sentences Vocabulary: Affixation – Paronyms – Acronyms – Word Building CO5

\*Note- Additional topics that can be introduced during the course but are out of the prescribed syllabus.

COMPUTATIONAL THINKING AND PROBLEM SOLVING							
Code: 23CM3101	Credits: 3						
Instruction : 3 Periods	Sessional Marks: 40						
End Exam : 3 Hours	End Exam Marks: 60						

#### **Prerequisites:**

• No prerequisites.

#### **Course Objectives:**

• This course aims to provide exposure to computational thinking for problem-solving. It aims to train students to use algorithms, data, and simulations to investigate questions and develop new understandings. This course involves a lab component designed to give students hands-on experience with the flowgorithm tool.

#### **Course Outcomes:**

By t	he end of the course, the student will be able to:
1	Apply computational thinking concepts and techniques, including iterators, variables, filtering, and data types, to develop effective solutions for various problems.
2	Design and implement efficient solutions using dynamic filtering conditions, pseudo code, and procedures with parameters to solve complex problems.
3	Apply sequenced and nested iterations, sorting algorithms, and list manipulations to efficiently and effectively solve complex problems involving datasets and elements.
4	Demonstrate an understanding of dictionary manipulations and apply them to solve problems involving complex data structures.
5	Demonstrate the ability to use recursion to efficiently search through complex data structures, such as graphs and trees, and identify the underlying properties of these structures.

#### Mapping of Course Outcomes with Program Outcomes:

СО							PO						I	<b>PSO</b>
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
1	2	3	3	_	2	-	-	_	2	-	-	-	2	-
2	2	3	3	2	2	-	-	-	2	-	-	-	2	-
3	2	3	3	2	2	-	-	-	2	-	-	-	2	-
4	2	3	3	2	2	-	-	-	2	-	-	-	2	-
5	2	3	3	-	2	-	-	-	2	-	-	-	2	-

#### UNIT- I

#### (10 Periods)

**Introduction:** What Is Computational Thinking? **Getting Started with Computational Thinking-I:** 

**Iterators**: Going through a dataset, Flowcharts, Iterator flowchart for cards;

**Variables**: Generic flowchart for iterator with variables, Counting, Sum, Average, Accumulator; **Filtering**: Selecting cards, Examples, Compound conditions, Looking for a data element;

**Data Types:** Sanity of data, Basic data types, Compound data types, Subtypes, Transforming the data element, Datatypes for the elements in the dataset.

#### **Learning Outcomes:**

- 1. Understand computational thinking, digital data processing, the historical origins of computing, the basics of the modern computer, and Moore's law.
- 2. Design sequential algorithms, understand the concept of software and program execution, the useof variables and datatypes, and the modularization of algorithms.

#### UNIT-II

#### (10 Periods)

#### **Getting Started with Computational Thinking-II:**

Filtering-Dynamic Condition: Maximum, Minimum, Examples using maximum or minimum, Combining static dynamic and state conditions;

**Pseudocode:** Basic iteration, Filtering, Compound conditions, Filtering with dynamic conditions; **Procedures and Parameters:** Pseudocode for procedures, Parameters, Checking for a single outstanding student.

#### Learning Outcomes:

- 1. Develop the ability to filter data in dynamic conditions and apply this skill to real-world problems.
- 2. Learn to plan and organize complex algorithms using pseudocode and create reusable andmanageable code using procedures and parameters.

#### UNIT-III

#### (10 Periods)

#### **Computational Thinking for Data Science-I:**

**Element<-->Dataset:** Sequenced iterations, Compare with average, Classifying/Ranking the elements;

**Element**<-->**Element:** Nested iterations, Reducing the number of comparisons,Examples of nested iterations;

#### **Learning Outcomes:**

- 1. Understand the basic concepts of relationships between elements and datasets.
- 2. Understand the basic concepts of relationships between elements themselves.

#### UNIT-IV

#### (10 Periods)

#### **Computational Thinking for Data Science-II:**

Lists: Pseudocode for lists, Pairs, Triples, Lists of lists;

**Sorted Lists:** Insertion Sort, Correlating marks in Maths and Physics, Pareto principle for shopping.

**Dictionaries:** Pseudocode for dictionaries, Examples, Side effects- Deleting a key from a dictionary;

#### Learning Outcomes:

- 1. Learn to work with lists and sorted lists and develop proficiency in sorting algorithms such as insertion sort.
- 2. Understand how to use dictionaries to represent data in problem-solving.

# UNIT-V

#### (10 Periods)

#### **Higher Level Computational Thinking:**

**Graphs:** Matrices, Applications, Train graphs, Edge Labeled graphs, Rectangle graphs. **Recursion:** Iteration over hierarchical structures, Recursion trees, Using recursion to do sorting, Evaluating expressions;

#### **Learning Outcomes:**

- 1. Understand how to use graphs to represent data in problem-solving.
- 2. Understand the concept of recursion, learn how to use recursion to implement sorting algorithms, to evaluate expressions and traverse data structures such as trees and graphs.

#### **Text Books:**

1. Computational Thinking: A primer for programmers and data scientists, G. Venkatesh,Madhavan Mukund, Notion Press, 2021.

#### **Reference Books:**

1. Computational Thinking For The Modern Problem Solver, David D. Riley, Kenny A. Hunt, CRC Press, Taylor & Francis Group, 2014

# DIGITAL LOGIC DESIGN

Code: 23EC3103	Credits: 3
Instruction: 3 periods	Sessional marks: 40
End exam: 3hours	End exam marks: 60

# Course Outcomes: At the end of the course the student will be able to:

CO	BL	CO Statement
CO1	BL-3	Perform conversions between different number systems and codes and
COI	DL-J	apply the Boolean algebra to minimize the given logic expressions.
CO2	BL-3	Minimize the given Boolean expressions using logic gates and K-Maps
CO3	BL-4	Design and Analyze combinational logic circuits.
CO4	BL-4	Design and Analyse sequential logic circuits like flip-flops and registers
CO5	BL-3	Design and Analyse counters logic circuits and PLDs

				Progra	ım Out	come	s (PC	s)					DC	0.7

# **Program Matrix**

#### UNIT –I NUMBER SYSTEMS

Number representation, Conversion of bases, Binary Arithmetic, Representation of Negative numbers, Binary codes: weighted and non-weighted BOOLEAN ALGEBRA: Basic definitions, Axiomatic Definitions, Theorems and properties, Boolean Functions, Canonical and standard forms. **(TB1-chapters1&2)** 

# UNIT-II

LOGIC GATES- AND, OR, NAND, NOR, XOR,XNOR (TB2-chapter 4) LOGICMINIMIZATION

The K-Map Method: Two variable map, Three variable map, four variable map Prime Implicants, Don't Care conditions, NAND and NOR implementation, Quine-Mccluskey (QM) (up to four variables) Technique.(**TB1-chapters3**)

# UNIT-III

# COMBINATIONAL LOGIC DESIGN

Combinational circuits, Analysis Procedure, Design Procedure, Code Converters (BCD to XS3 (XS3 to BCD)), Gray to Binary (Binary to Gray), Binary Adder-Subtractor, Decimal adder, Binary Multiplier, Magnitude comparator, Decoders, Encoders, Multiplexers. De-Multiplexer (**TB1-chapters 4&9.7**)

# UNIT-IV

### **SEQUENTIAL CIRCUITS-1**

Sequential logic- Introduction to Latch and Flip flop, clocked S-R, JK, D, T flip flops. Excitation table of Flip flop, Flip flop conversion, Clocked flip flop design, Edge triggered flip flop Registers, Applications of Shift registers, universal shift register,(**TB2-chapters7&8(till8.5**))

# UNIT –V

# **SEQUENTIAL CIRCUITS-2**

Counters- Ripple counters, Synchronous counters, Ring counters, Johnson counter. PLD's- PAL, PLA and PROM

BASICS OF ELECTRICAL & F	ELECTRONICS ENGINEERING
Code: 23EE3101	Credits: 3
Instruction : 3 Periods	Sessional Marks : 40
End Exam : 3 Hours	End Exam Marks : 60

Prerequisites: Basic Knowledge of electric current concepts from Intermediate

#### **Course Objectives:**

- 1. To analyze using basic network theorems and reduction techniques for DC circuits.
- 2. To understand behavior of magnetic circuits and operation of electrical machines.
- 3. To understand operation and phasor diagrams of various basic electronic components.

**Course Outcomes**: At the end of the course the student will be able to:

CO1	Apply network theorems and calculate various parameters of DC circuits.
CO2	Analyze the behavior of magnetic circuits and calculate the parameters of
02	magnetic circuits
CO3	Analyze the construction and working of DC and AC machines
CO4	Illustrate the construction & working of PN Diode, Half wave and Full
04	wave rectifiers.
CO5	Explain the construction & operation of Transistor and FET

# [10 Periods]

# **DC Circuits**

UNIT-I

Circuit Elements, Basic Laws, KCL, KVL, Linearity principle (Superposition), Mesh and Nodal analysis, Thevenin's and Norton's theorems.

# UNIT-II

# **Magnetic Circuits**

Definition of Magnetic circuit, Reluctance, Magneto-motive force, Magnetic flux, Simple problems on series magnetic circuits, Faraday's Law of Electromagnetic induction, statically and dynamically induced EMF.

# UNIT-III

# **DC Machines**

DC Generator construction, Working of DC generator, DC Motor working principle, significance of back EMF, Applications

# **AC Machines**

Transformer construction, working principle, Three-phase induction motor construction, Three-phase induction motor working principle.

# UNIT-IV

# Semiconductor Diode and Rectifiers

Intrinsic and Extrinsic Semiconductors, PN Junction Diode-Forward and Reverse biases, Avalanche break down, Construction, Operation and Characteristics of Half wave rectifier, Full wave center tapped and bridge rectifiers.

# UNIT-V

# Transistor, FET/MOSFET Characteristics

The common base configuration, Input and Output characteristics, Construction of FET, Transfer and Drain characteristics, Construction of MOSFET, and Characteristics of enhancement and depletion modes.

COMMUNICATI	VE ENGLISH LAB
Code: 23EN2201	Credits: 1.5
Instruction : 3 Periods	Sessional Marks : 50
End Exam : 3 Hours	End Exam Marks : 50

#### Prerequisites: Basic English Grammar

#### **Course Objectives:**

- 1. To give idea about phonetics, linguistics and LSRW skills
- 2. To develop conversational skills among the students
- 3. To introduce different accents of English language through presentations
- 4. To train the students to do various exercises on vocabulary and grammar

#### **Course Outcomes:**

By the end of the course, students will be able to

1.	Understand various linguistic, phonetic and communicative aspects	L2
2.	Apply general conversational activities in different socio-cultural contexts with logic	cal
	thinking.	L3
3.	Analyze cultural diversity of several nations' languages through presentations.	L4
4.	Appraise and reframe various exercises for getting better employability	L4

#### **CO-PO – PSO Mapping**

Credits: 1.5
Sessional Marks: 50
nd Exam Marks: 50
£

Prerequisites:

• No prerequisites.

# **Course Objectives:**

• The course aims at applying computational thinking skills to solve problems logically,systematically, and effectively, and also develop critical thinking skills.

#### **Course Outcomes:**

By t	By the end of the course, the student will be able to:							
1.	1. Analyze complex problems and identify patterns and relationships,							
2.	. Design and implement algorithms using flowcharts to solve problems.							
3.	Communicate ideas and solutions effectively through clear and concise flowcharts.							
4.	Apply computational thinking skills to solve a wide range of problems.							
5.	Evaluate the strengths and weaknesses of different problem-solving approaches.							

# Mapping of Course Outcomes with Program Outcomes:

#### Use flowgorithm tool to solve various problems not limiting to the

#### ones given below.Write the pseudocode and create a flowchart to

- 1. Calculate the salary of a worker after a 15% pay increase.
- 2. Classify the angles of a triangle as acute, obtuse, or right.
- 3. Find the total area of all triangles.
- 4. Find the sum and average of a given list of numbers.
- 5. Find the factorial of a given number.
- 6. Check whether a given year is a leap year.
- 7. Find the largest and smallest numbers in a given list of numbers.
- 8. Find the sum of the squares and cubes of the first 50 natural numbers.
- 9. Find the sum of girls' and boys' marks in the class.
- 10. Convert the temperature from Fahrenheit to Celsius or vice versa.
- 11. Check whether a given word or phrase is a palindrome.
- 12. Generate the first 10 numbers of the Fibonacci sequence.
- 13. Manipulate a given string, such as reversing it or removing certain characters.
- 14. Convert a binary number to its decimal equivalent.
- 15. Solve a quadratic equation given its coefficients.
- 16. Determine whether a given number is prime or composite.
- 17. Generate prime numbers within a range.
- 18. Print the following

sequences.a.6,8,10,12,. 48

b. 5,7,9,11,.....45

c. The first 50 numbers in the series 1,6,11,16,. ..., and calculate the sum of these terms.

19. Create the following patterns

*******	1 * * * *	1	1	1
*****	12***	121	21	121

- 20. Calculate the factorial of a positive integer using recursion.
- 21. Calculate the nth Fibonacci number using recursion.
- 22. Find all even positive numbers in the first array and copy them to the second array.
- 23. Find the frequency of n numbers in the array and display the frequency table.

# **Text Books:**

1. Computational Thinking: A primer for programmers and data scientists, G. Venkatesh, Madhavan Mukund, Notion Press, 2021.

# **Reference Books:**

1. Computational Thinking For The Modern Problem Solver, David D. Riley, Kenny A. Hunt, CRC Press, Taylor & Francis Group, 2014

APPLIED CHEMISTRY LAB									
CODE: 23CY1202	Credits: 1.5								
Instruction : 3 Periods	Sessional Marks :50								
End Exam : 3 Hours	End Exam Marks :50								

Prerequisites: Chemistry at +1 and +2 level

#### **Course Objectives**

- 1. In make them understand on various methods of analyzing samples (Soil,food,water)
- 2. To create knowledge on handling advanced instrumentation.

Course Outcomes

At the end of the course

CO	Statement						
1	Apply volumetric analysis and titration principles to prepare standard solutions, standardize acids with strong bases, and assess water quality, food, and soil samples.						
2	Proficiently employ diverse analytical methods (spectrophotometric, pH metric, conductometric, and potentiometric) to estimate chemical properties of substances and accurately interpret data results.						
3	Cultivate problem-solving and critical thinking skills through practical application of analytical methods and instrumentation in engineering design and decision-making.						

# **CO-PO** Mapping

СО-РО	PO1	PO2	PO3	PO4	PO5	PO6	<b>PO7</b>	PO8	PO9	PO10	PO11	PO12
CO1	3	1	1	1		1		1	1	1		1
CO2	3	1	2	1		1		1	1	1		1
CO3	3	1	2	1		1		1	1	1		1

Correlation levels: 1- Slight (Low) 2- Moderate (Medium) 3-Substantial (High)

- 1. Preparation of Standard solutions and Standardisation of acid by using Strong base.
- 2. Determination of Hardness, pH, TDS in ground water sample.
- 3. Estimation of Zinc in food samples by Complexometric method.
- 4. Estimation of copper content in industrial wastewaters.
- 5. Estimation of available chlorine content in potable water using Iodometric method.
- 6. Estimation of Iron in biological samples using potassium thiocyanate by Spectrophotometric method.

7. Determination of electrolytic Strength of Lead acid battery by pH metric method

8.Estimate the strength of acids in an acid mixture by using Conductometric method.

9. Estimation of Chromium in Dichromate by using Potentiometric method.

10.Determination of Viscosity of various liquid fuels using Ostwald's Viscometer.

#### **Demonstration Experiments**

11. Determination of Dissolved Oxygen in a water sample using Iodometric method.

12. Microwave assisted organic synthesis.

#### **Learning Outcomes**

Acquire knowledge and skills in using chemical apparatus/equipment for analyzing various sample solutions.

Will get awareness on the amount of chemical content existing in the sample and can distinguish the output with world health organization limits.

Can explore this knowledge in solving society related problems.

#### **Prescribed Text books**

- 1. Vogel's text book of Quantitative analysis, 5<sup>th</sup>edition,G.H.Jeffery,J.Bassett,J.Mendham,R.S.Denney.
- 2. Vogel's A text book of Macro and semi micro Inorganic analysis, revised by G.Svehla

ENVIRONMENTAL SCIENCE							
CODE: 23MC0105	Credits: 0						
Instruction : 3 per week	Sessional Marks : -						
End Exam : -	End Exam Marks :-						

#### With effect from 2023-24 Mandatory (Non Credit) course for all branches

Prerequisites: +1 & +2

#### **COURSE OBJECTIVES:**

Inculcating in students the awareness towards importance about Environmental science Understand the importance natural resources, Structure, and functions of an ecosystem Inducing knowledge on Sources, effects, and methods to reduce environmental pollution Able to know the meaning of sustainable development and correlate social issues related to environment.

#### **Course Outcomes:**

#### By the end of the semester, the student will beable to:

CO.No.	Statement
CO-1	Identify the characteristics of various natural resources and can implement the conservation practices
CO-2	Realize the importance of Ecosystem and Biodiversityfor maintaining ecological balance
CO-3	Classify, analyze various pollutants and can developmethodsforsolvingproblemsrelatedtoenvironment
CO-4	Implement the environmental laws or defend issuesby getting awareness on legal aspects related to environmental issues
CO-5	Promote awareness on local environmental issues byparticipating in group activities, seminars, takingproject work

# Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes:

	CO-PO-PSO justification
1	Understand the scope of environmental science. Can Elaborate their knowledge over Natural resources their conservation practices.
2	Apply knowledge of structure and functions of Ecosystem in various applications. Able to gain knowledge over values of biodiversity.
3	Acquire knowledge on sources, effects of various pollutants and also understand the advanced
	methodologies to reduce contamination
4	Correlate social issues caused due to environmental changes and can plan for solutions for society related problems

#### UNI T I INTRODUCTION TO ENVIRONMENT ANDNATURALRESOURCES

8Periods

**Introduction:**Definition,Multidisciplinarynatureofenvironmentalstudies,ScopeandI mportanceofEnvironmental Sciences, Need for public awareness.

NaturalResources:RenewableandNon-Renewableresources-Forestresources-

useandoverexploitation, deforestation, Water resources- aquifers, dams and benefits, conflicts over water; Food resources- effects ofmodern agriculture practices, Energy

resources-conventional and non -conventional energy resources.

#### Activities:

Need for Public Awareness (Campaign), Renewable vs. Non-Renewable Resources (Group Discussion), Deforestation and its Impact, Water Conflicts (Case studies).

# UNIT-II

# **ECOSYSTEM & BIODIVERSITY**

#### **8Periods**

Ecosystem:Conceptofanecosystem-

structureandfunctionofanecosystemFoodchains,foodwebsandecological pyramids, Energy flow in an ecosystem, Ecosystem regulation, Ecological succession. **Biodiversity:**Definition,types,IndiaasaMegadiversityNation,Valuesofbiodiver sity,Hotspotsofbiodiversity, Threats to biodiversity, Endangered and endemic species, Conservation of biodiversity.

# Activities:

Ecosystem (Field trip),Food chain and Food Web(Model presentations), Endangered Species (Case Studies),Ecosystem regulation, Values of Biodiversity (Group Discussion),Endangered Species Awareness (Poster presentation).

#### UNIT -III ENVIRONMETAL POLLUTION ANDWASTEMANAGEMENT

#### 8Periods

**Pollution:**Sources,effectsandcontrolmeasuresofAirpollution,NoisePollution,WaterP ollution,SoilPollution, Radio Active Pollution; Climate Change, Ozone depletion, Acid rains –causes and adverseeffects.

**Solid waste management**: Sources and effects of municipal waste, bio-medical waste, Industrial waste, e-waste, Process of waste management-composting, sanitary landfills, incineration. Green Chemistryconcepts,

#### Activities:

Pollution (Slogan writing),Pollution Control Measures (Group Discussion) ,Climate Change (Case Studies), Waste-to-Art (Poster presentation).

#### UNIT-IV

#### SOCIALISSUESANDENVIRONMENTALLEGISLATIONS

**Social Issues and the Environment**: Sustainable development, Environmental Impact Assessment, Rain waterharvesting, water shed management. Resettlement and rehabilitation of people, Environmental ethics.

**Legislational Acts:** Importance of Environmental legislation, Air (Prevention and Control of Pollution) act, Water (Prevention and control of Pollution) act, Wildlife Protection act, Forest Conservation act.

#### **Activities:**

Sustainable Development,Environmental Ethics(Group Discussion),Environmental Impact Assessment (EIA),Resettlement and Rehabilitation (Case Studies), Rainwater Harvesting(Model presentations), Environmental Legislation (Awareness Campaign).

#### UNIT- V HUMAN POPULATION ANDTHEENVIRONMENT

**5Periods** 

Human population and environment- Population growth, Population explosion; Family Welfare Programme;Role of information technology on environment and human health; Value Education – HIV/AIDS – Women andChild Welfare

**FIELD WORK/PROJECT**: Visit to a local area to document environmental problem. Prepare a record or presentation and to be discussed in classroom. Certificate soft copy will be provided to student.

#### Activities:

Population Growth, Role of Information Technology and Environment, Women Empowerment, Family Welfare Program (Awareness Campaign), Women and Child Welfare (Case Studies), Population and Environment (Short film).

#### **Prescribed Book**

- 1. Anubha Kaushik &C.P.Kaushik, "*Perspertives of Environmental Studies*" by 5<sup>th</sup>edition New AgeInternational Publications, 2015.
- 2. Palaniswamy- "Environmental Studies", 2<sup>nd</sup>edition, Pearson education2015.

#### **Reference Books**

1. **S. Deswal, A. Deswal**, "*Basic course in Environmental studies*", 2<sup>nd</sup>edition, Dhanpatrai Publications,2008.

# SEM-II

ORDINARY DIFFERENTIAL EQUATIONS AND NUMERICAL METHODS								
CODE: 23MA1102	Credits: 3							
Instruction : 3 Periods	Sessional Marks : 40							
End Exam : 3 Hours	End Exam Marks : 60							

Prerequisites: Matrices, Differentiation, Differential equations, Integration and Functions.

#### **Course Objectives:**

Create and analyze mathematical models using first and higher order differential equations to solve application problems such as electrical circuits, orthogonal trajectories and Newton's law of cooling and also familiarize the student in various topics in numerical analysis such as interpolation, numerical differentiation, integration and direct methods for solving linear system of equations.

Course Outcomes: By the end of the course, students will be able to

1.	Demonstrate solutions to first order differential equations by various methods and solve basic application problems related to electrical circuits, orthogonal trajectories and Newton's
	law of cooling.
2.	Discriminate among the structure and procedure of solving a higher order differential equations with constant coefficients and variable coefficients.
3.	Apply various numerical methods to solve linear and non-linear equations.
4.	Familiarize with numerical integration and differentiation.
5.	Understand Laplace transforms and its properties, and finding the solution of ordinary differential equations.

# **CO-PO – PSO Mapping:**

CO	РО													0
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	3	2	1	1							1	2		
CO2	3	2	1	1							1	2		
CO3	3	2	1	1							1	2		
CO4	3	2	1	1							1	2		
CO5	3	2	1	1							1	2		

Correlation levels 1: Slight (Low)

2: Moderate (Medium)

3: Substantial (High)

UNIT I Ordinary differential equations of first order and its applications : Linear equations -Bernoulli's equations - Exact differential equations - Equations reducible to exact equations -Orthogonal trajectories - Simple electric circuits (L -R circuit problems) - Newton's law of cooling.

Sections: 11.9, 11.10, 11.11, 11.12, 12.3, 12.5 and 12.6.

#### **UNIT II**

Higher order linear differential equations and its applications : Definitions - Operator D -Rules for finding the complementary function - Rules for finding the particular integral - Method of variation of parameters - Equations reducible to linear equations with constant coefficients: Cauchy's homogeneous linear equation - Legendre's linear equation. Applications: L - C - Rcircuit problems.

Sections: 13.1, 13.3, 13.4, 13.6, 13.8(I), 13.9, 14.5(ii).

#### **UNIT III**

Numerical solutions of algebraic and transcendental equations :

Solution of algebraic and transcendental equations: Bisection method - Regula-Falsi method -Newton-Raphson method.

Solution of linear simultaneous equations: Gauss elimination - Gauss Jordan - Gauss Seidel.

Sections: 28.2, 28.3, 28.5, 28.6(1,2), 28.7(2)

**UNIT IV 10 Periods** Interpolation, Numerical Differentiation and Integration : Finite differences - Other difference operators - Relation between operators - To find one or more missing terms -Newton's interpolation formulae. Interpolation with unequal intervals: Lagrange's interpolation formula.

Numerical differentiation: Newton's forward and backward differences formula to compute first and second derivatives.

Numerical integration: Trapezoidal rule - Simpson's 1/3<sup>rd</sup> and 3/8<sup>th</sup> rules.

Sections: 29.1(1,2), 29.4(i), 29.5, 29.6(1,2), 29.9, 29.10, 30.2(1,2), 30.6, 30.7, 30.8.

#### UNIT V

**10 Periods** 

Laplace Transforms and its applications : Introduction - Definitions - Transforms of elementary functions - properties of Laplace transforms - Transforms of periodic functions -Transforms of derivatives - Transforms of integrals - Multiplication by  $t^n$  - Division by t -Evaluation of integrals by Laplace transforms.

Inverse transforms - method of partial fractions - Other methods of finding inverse transforms -

#### **10 Periods**

#### **10 Periods**

**10 Periods** 

Convolution theorem (without proof) - Application's to differential equations - Unit step function and unit impulsive functions.

# Sections: 21.1, 21.2, 21.3, 21.4, 21.5, 21.7, 21.8, 21.9, 21.10, 21.11, 21.12, 21.13, 21.14, 21.15, 21.17 and 21.18.

#### **TEXT BOOKS:**

1. B. S. Grewal, Higher Engineering Mathematics, 44/e, Khanna Publishers, 2017.

#### **REFERENCE BOOKS:**

- 1. Erwin Kreyszig, Advanced Engineering Mathematics, 10/e, John Wiley & Sons, 2011.

APPLIED PHYSICS									
Code:23PY1101	Credits:03								
Instruction: L - 3, T- 1 P – 0	Sessional Marks: 40								
EndExam : 3 Hours	End Exam Marks:60								

#### **Prerequisites:**

#### **Course Objectives:**

- 1. To enhance student's knowledge of theoretical and modern technological aspects in physics and to introduce fundamentals of physics relevant to engineering applications
- 2. To introduce advances in technology for engineering applications

**Course Outcomes:** At the end of the course the student will be able to:

CO	BL	CO Statement
C01	BL-4	Classify the properties of magnetic and super conducting materials to enhance
COI	DL-4	the performance of device applications.
COD	DI 2	Identify the various dielectric materials for mechanical and communication
CO2	BL-3	device applications.
CO3	BL-2	Understand the Synthesis and characterization of nano phase materials for
COS		industrial applications.
CO4	BL-3	Apply the optical phenomena like Interference, Diffraction to various fields and
04	DL-3	make use of Lasers and Optical Fibers in emerging Fields.
CO5	BL-2	Extend the knowledge of basic concepts of semiconductors to illustrate the
005	DL-2	semiconductor devices

CO5	3	2	3	2	2					1		1		

#### UNIT-I

**Magnetic materials:** Definition of magnetic permeability, magnetization and magnetic susceptibility, classification of magnetic materials, properties of diamagnetic and paramagnetic materials, ferromagnetic materials - hysteresis curve , domain theory of ferromagnetism, soft and hard ferromagnetic materials and its applications

**Modern Engineering physics** S.L Gupta and Sanjeev Gupta, Dhanpat Rai publications Superconductivity: Introduction, properties of superconductors, effect of temperature and magnetic field, Meissoner effect, flux quantization, type – I and type – II superconductors, high temperature superconductors, applications of superconductors, BCS theory (qualitative)

# A text book of engineering physics- M.N.Avadhanulu & P.G.Kshirasagar, S.Chand Publication

#### Learning Outcomes:

The students will be able to

- Classify the magnetic materials based on susceptibility and their temperature dependence
- Explain the applications of dielectric and magnetic materials
- Apply the concept of magnetism to magnetic data storage devices
- Classify superconductors based on Meissner's effect

#### UNIT-II

#### 10 periods

**Dielectric materials**: Definition of electric dipole moment, dielectric polarization and dielectric constant, Types of polarization – electronic, ionic and oriental polarization, expression for polarisability, internal fields in solids, Classius – Mossotti equation, frequency dependence of electronic polarization, properties of ferroelectric materials and their applications.

# Modern Engineering physics S.L Gupta and Sanjeev Gupta, Dhanpat Rai publications Learning Outcomes:

The students will be able to

- Explain the concepts of dielectric constant and polarization in dielectric materials
- Summarize various types of polarization of dielectrics
- Interpret internal fields with Claussius- Mosotti relation in dielectrics

#### UNIT-III

#### 10 periods

**Nanophase materials**: Introduction to nanophase materials, properties of nanophase materials, synthesis of nanophase materials – chemical vapour deposition, sol-gel method, mechanical attrition method, applications of nanophase materials

**Modern Engineering physics** S.L Gupta and Sanjeev Gupta, Dhanpat Rai publications **Techniques for characterization of materials:** Principles of x-ray florescence – X-ray Diffraction– Electron microscopy (SEM and TEM).

Engineering Physics -- A.Marikani, PHI Learning Private Limited

### 10 periods

#### **Learning Outcomes:**

The students will be able to

- Understand the nano phase particles with bulk materials
- Explore the various synthesizing patterns of the Nano materials
- Summarize the various characterization techniques of nano materials
- Explain the applications of Nanophase materials

# UNIT-IV

#### 10 periods

**Interference:** Introduction, principle of superposition, coherence, Young's double slit experiment, conditions for interference, interference in thin films by reflection, wedge shaped film and Newton's rings

**Diffraction:** Introduction, Fresnel and Fraunhoffer diffraction, diffraction at a single slit

Lasers and Fibre Optics: Introduction, characteristics of a laser beam, spontaneous and stimulated emission of radiation, population inversion, Ruby laser, He-Ne laser, semiconductor laser, applications of lasers, principle of propagation of light in optical fibres', acceptance angle and acceptance cone, Numerical Aperture, Optical fibres in communication System.

# Modern Engineering physics S.L Gupta and Sanjeev Gupta, Dhanpat Rai publications Learning Outcomes:

The students will be able to

- Explain the need of coherent sources and the conditions for interference
- Analyze the differences between interference and diffraction with applications
- Understand the working principle of LASER light Sources
- Apply the concepts to learn the types of lasers
- Identifies the Applications of lasers in various fields
- Explain the working principle of optical fibers
- Identify the applications of optical fibers in various fields

# UNIT-V

#### 10 periods

**Semiconductor Physics:** Intrinsic and extrinsic semiconductors, Fermi level, carrier concentration in intrinsic semiconductor, direct and indirect band gap semiconductors. Lorentz force, Hall Effect and its applications.

**Physics of semiconductor devices: E**nergy diagram of p-n diode, working of a diode, voltampere characteristics of p-n junction, light emitting diode (LED), liquid crystal display (LCD), photodiode

# Modern Engineering physics S.L Gupta and Sanjeev Gupta, Dhanpat Rai publications Learning Outcomes:

Thestudents will beable to

- Classify the Intrinsic and extrinsic semiconductors
- Interpret the direct and indirect band gap semiconductors
- Identify the type of semiconductor using Hall effect
- Identify applications of semiconductors in various electronic devices

# **Reference books:**

1) Engineering physics - V.Rajendran Tata McGraw Hill Education Private Limited

- 2) Engineering Physics -- Dattu Ramanlal Joshi Tata McGraw Hill Education Private Limited

# **PROGRAMMING WITH C**

Code:23CM3102	Credits: 3
Instruction : 3 Periods	Sessional Marks : 40
End Exam : 3 Hours	End Exam Marks : 60

Prerequisite: No specific prerequisites are needed

### **Course Objectives:**

- This course aims to provide exposure to problem-solving through programming in C.
- It aims to train the student, the concepts of C-Programming Language.

#### **Course Outcomes:**

After	completion of this course, a student will be able to:
CO 1	Gain knowledge in problem solving and steps in Program development.
CO 2	Apply the basic concepts of C.
CO 3	Create user defined functions and implement string operations.
CO 4	Implement different operations on arrays and Demonstrate pointers.
CO 5	Apply structures and unions and Implement file Operations in C programming for any given application

# Mapping of Course Outcomes with Program Outcomes:

5	1	2	3	2	1	-	-	-	-	-	-	1	-	-	

### UNIT-I

Electronic Computers Then and Now, Computer Hardware, Computer Software, Professional Ethics for Computer Programmers.(Text Book 2 Page 1-39)

Computer Languages, Writing Editing compiling and linking programs, Program Introduction to C Language - Background, Structure of a C program, Execution. Identifiers, Types, Variables, Constants, Coding Constants, Formatted Input / Output. (Text Book 1)

Learning Outcomes: At the end of this Unit the student will be able

- To gain knowledge in the concepts of problem solving
- Identify the steps in Program development

#### **UNIT-II:**

**12 Periods** 

Program-expressions, precedence and Associativity, Side effects, evaluating expressions, mixed type expressions, statements. Selection -Making Decisions - Logical data and operators, Bitwise Operators- logical bitwise operators, shift operators, bitwise use, Two way selection, Multi way selection Repetition - concept of a loop, pretest and posttest loops, initialization and updating, event controlled and counter controlled loops, loops in C, loop examples, other statements related to looping, looping applications (Text Book 1)

Learning Outcomes: At the end of this Unit the student will be able to

- Apply decision making in c programming for problem solving
- Apply controlled structures in c programming for problem solving

#### **UNIT-III:**

### Functions-Designing Structured Programs, Functions in C, user defined functions, standard libraryfunctions, scope, Recursion

Storage classes-auto, register, static, extern

Strings - Concepts, C Strings, String Input / Output functions, arrays of strings, string manipulation functions (Text Book 1)

Learning Outcomes: At the end of this Unit the student will be able to

- Implement User defined functions.
- Use string functions and Apply string manipulation operations for problem solving.

#### **UNIT-IV:**

Arrays – Concepts, using arrays in C, array applications, linear search, and Bubble sort, two – dimensional arrays, multidimensional arrays.

Pointers – Pointer Applications – Arrays and Pointers, pointer arithmetic and arrays, passing an array to a function, understanding complex declarations, memory allocation functions, array of pointers. (Text Book 1)

Learning Outcomes: At the end of this Unit the student will be able to

- Implement Arrys with different dimensions
- Work with pointers and apply pointer to other data types and function

#### **12 Periods**

# **12 Periods**

# **12 Periods**

# UNIT-V:

#### **12 Periods**

Derived Types Enumerated, Structure and Union Types – The Type Definition (typedef), Enumerated types, Structures, accessing structures, Complex structures, arrays of structures, structures and functions, unions

Text Files – Concept of a file, files and streams, input / output functions, formatting input/output functions, character input/output functions, character input/output examples **(Text Book 1)** 

Learning Outcome: At the end of this Unit the student will be able to

- Create derived data types using structure and union
- Store and retrieve data using files

#### **Text Books:**

- 1. **B. A. Forouzan and R. F. Gilberg** –*Cengage Learning*, *Computer Science: A Structured Programming Approach Using C* Third Edition.

DESIGN THINKING							
CODE: 23ME3204	Credits: 2						
Instruction : 2 Periods	Sessional Marks : 50						
End Exam : 3 Hours	End Exam Marks : 50						

#### **Prerequisite: Branch specific**

#### **Course Objectives:**

- 1. To familiarize students with design thinking concepts and principles
- 2. To ensure students can practice the methods, processes and tools of design thinking.
- 3. To ensure students can apply the design thinking approach and have ability to model real world situations.
- 4. To enable students to analyze primary and secondary research in the introduction to design thinking

**Course Outcomes:** At the end of the course the student will be able to:

CO-1	<b>Explain</b> the design thinking principles & <b>Identify</b> an opportunity and scope of the				
001	project and <b>prepare</b> the problem statement				
CO-2	Apply the empathy tools to study the user and summarize finding related to				
	problem for define phase.				
CO-3	<b>Describe</b> and <b>define</b> the problem specific to the user group and <b>apply</b> Ideation				
	tools to generate Ideas to solve the problem				
<b>CO-4</b>	<b>Develop</b> prototypes for test phase.				
CO-5	Test the ideas and demonstrate Storytelling ability to present the Ideas.

# **SYLLABUS**

**Week 1:** Introduction to Design Thinking, Need of design thinking, 7 characteristics of design thinking, comparison of design thinking to other ways of thinking, tools and resources, 5 actions phases of Design thinking, 5 characteristics of action plan. Double Diamond Technique for Design thinking.

Activity: Case Studies related to application of Design Thinking in General, engineering and service areas **Home Task:** Identify an opportunity and scope of the project for providing solution through design thinking.

**Week 2:** Problem statement (5W+H & HMW) tool for defining the identified problem. Innovation in Design thinking, Definition of Innovation, Types of Innovations

# Activity:

1. Prepare the initial Problem statement for the identified problem applying design thinking [Initial Statements – 1:1, final statement 1: Team.]

**Week 3:** Product innovation, Process Innovation and Organizational Innovation. Characteristics of Innovation, Levels of Innovation, Innovation Towards Design, Design principles tool.

#### Activity:

2. Develop a chart with the design principles that will guide your design thinking process.

[Design Principles sheet 1: Team]

**Week 4:** Human Centric Design Process. Tools for Empathy Phase, Interview for empathy, Ask 5x why, Stakeholder map

# Activity:

3. Prepare the Questionnaire for doing Interview for empathy [ Min 20 Questions ]

4. Prepare the Stake Holder Map [1: Team.]

5. Apply Ask 5x why tool for identifying the cause identification of the problem[1:1]

**Home Task:** Prepare the google form to collect the basic information of interviewee and the responses for empathy questionnaire / conduct the interview to the stake holders and record the responses.

**Week 5:** Persona/User profile, Emotional response cards, Empathy map and Customer journey map. **Activity:** 

6. Prepare the Persona based on the responses received from the Stake holders. [3: Team]

7. Prepare the Empathy Map/ Customer Journey Map for summarizing pains & gains of stakeholders and insights [1: Team.]

**Home Task:** Use Jam Board as the extension activity for preparing multiple Empathy Map/ Customer Journey Maps

**Week 6:** Define point of view, Prepare "How might we..." tool for redefine the problem statement **Activity:** 

8. Define the Point of view from the insights of Empathy Map/ Customer Journey Map. [1:1]

9. Prepare HMW questions based on POV [ 10 questions]

10. Re-define the problem statement using HMW tool [1: Team.]

**Week 7:** Ideate Phase tools: Brainstorming, 6-3-5 Method, Special brainstorming, Analogies & benchmarking as inspiration.

# Activity:

11. Conduct Brainstorming Session/ Special Brainstorming Session/ 6-3-5 Method [Generate lots of Ideas]

Home Task: Use Jam Board as the extension activity for shortlisting Ideas							
Week 8: Ideate Phase tools: Dot voting, 2x2 Matrix							
Activity:							
12. List out the Ideas and shortlist using dot voting, 2x2 Matrix [Minimum 3]							
Home Task: Use Jam Board as the extension activity for shortlisting Ideas							
Week 9: Prototyping Phase: Methods and Tools, Low fidelity and High Fidelity prototypes, Low fidelity							
Prototype techniques							
Activity:							
13. Prepare the Low fidelity prototypes of the sort listed ideas (Sketches, Paper Models etc.) [1: 1]							
Week 10: High fidelity prototype techniques. Exploration map							
Activity:							
14. Finalize the Prototype by Exploration Map. [1: Team]							
15. Preparation of High fidelity prototype (3D Model) [1: Team]							
Week 11: Prototype to test.							
Activity:							
16. Prepare Final prototype and prepare it for testing[1: Team]							
Week 12: Test Phase: Methods and Tools, Testing sheet, Feedback capture grid							
Activity:							
17. Test the prototype and collect the feedback [3: Team]							
Home Task: Test the porotype with external stakeholders if necessary							
Week 13: Guide lines for Project report Preparation							
Activity:							
18. Iterate any phase based on the feedback received from stakeholders, modify the prototype							
Week 14: Road map for implementation, Storytelling as a presentation tool							
Activity:							
19. Prepare a road Map for the implementation. [1: Team]							
Week 15:							
Activity:							
20. Project Presentation by Storytelling and Project report Submission							

Note: 1. All iterative activities prior to the testing phase must be completed as home task.

**2.** Before starting the empathy Phase, the faculty/HoD must approve and finalise the initial problem statement, which can be domain specific or general.

S. No	Performance Expectation	Applicability in Design thinking Lab
1	Computing Systems (CS)	Expected to use computer and Computational tools for minimizing the tedious tasks.
2	Networks and the Internet (NI)	Use of internet for Surveying through google forms, Jam Board & Teams for Collaborative Work among the Stakeholders
3	Impacts of Computing (IC)	May not be applicable , Can be used for Persona Character design
4	Data & Analysis (DA)	Collecting the Date in Google Forms and expected analyze the data using Excel or google sheet to create persona and
5	Algorithms & Programming (AP)	Expected to breakdown the DT tasks and prepare a small algorithms for writing simple program in C / Python to Calculate/Test/Automate tasks wherever applicable.
6	Engineering Design (ED)	Expected while preparing Prototypes
7	Interaction of Technology and Humans (ITH)	Expected at Hi-fidelity Prototyping and Testing Phase
8	Nature of Technology (NT)	Expected at Ideate stage for providing creative and Innovative ideas
9	Effects of Technology on the Natural World (ETW)	Must be verified before prototyping
10	Ethics & Culture (EC)	The technology / product developed must be verified with economic, political, social, and cultural issues globally.

Design Thinking Lab Performance Expectation

Activity	Performance
	Expectation
1. Prepare the initial Problem statement for the identified problem	NI
applying design thinking	
2. Develop a chart with the design principles that will guide your	NI
design thinking process.	
3. Prepare the Questionnaire for doing Interview for empathy [	NI
Min 20 Questions ]	

4. Prepare the Stake Holder Map [1: Team.]	CS, NI
5. Apply Ask 5x why tool for identifying the cause identification	AP, CS
of the problem[1:1]	
6. Prepare the Persona based on the responses received from the	IC, DA, CS
Stake holders. [3: Team]	
7. Prepare the Empathy Map/ Customer Journey Map for	NI
summarizing pains & gains of stakeholders and insights [1: Team.]	
8. Define the Point of view from the insights of Empathy Map/	NI
Customer Journey Map. [1:1]	
9. Prepare HMW questions based on POV [ 10 questions]	NI
10. Re-define the problem statement using HMW tool [1: Team.]	NI
11. Conduct Brainstorming Session/ Special Brainstorming	NI,AP, NT, ETW, EC
Session/ 6-3-5 Method [Generate lots of Ideas]	
12. List out the Ideas and shortlist using dot voting, 2x2 Matrix [	NI
Minimum 3]	
13. Prepare the Low fidelity prototypes of the sort listed ideas	ED
(Sketches, Paper Models etc.) [1: 1]	
14. Finalize the Prototype by Exploration Map. [1: Team]	NI
15. Preparation of High fidelity prototype (3D Model) [1: Team]	CS, ED, NT
16. Prepare Final prototype and prepare it for testing[1: Team]	ED,ITH
17. Test the prototype and collect the feedback [3: Team]	NI, NT
18. Iterate any phase based on the feedback received from	-
stakeholders, modify the prototype	
19. Prepare a road Map for the implementation. [1: Team]	-
20. Project Presentation by Storytelling and Project report	-
Submission	

# **Proposed Design Thinking Lab Evaluation – 100M**

#### **Internal Evaluation: 50 M**

Continues Assessment: 40 Marks [2 marks/ Activity]

Objective/ Written test [ Average of 2 Tests]: 10M

# **External Evaluation: 50M**

Prototype Validation: 20 M

Report: 10M

Presentation: 10M

Viva: 10M

COMPUTER AIDED ENGINERING GRAPHICS								
CODE: 23ME3201	Credits: 3							
Instruction : 1 periods & 4 Practical/Week	Sessional Marks : 50							
End Exam : 3 Hours	End Exam Marks : 50							

# (CHEM, CIVIL,CSD, CSM, EEE, ECE,IT)

#### Prerequisites: Nil

#### **Course Objectives:**

The course is designed to introduce computer aided drafting skills and fundamentals of engineering drawing and further apply these principles to draw orthographic projections of points, planes, solids and isometric projections.

#### **Course Outcomes:**

By the end of the course, students will be able to

1.	<b>Draft</b> simple 2D drawings with dimensions using CAD software.						
2.	2. <b>Project</b> orthographically points and lines in various positions using CAD software.						
3.	Produce orthographic projections of plane surfaces using CAD software.						
4.	<b>Draw</b> orthographic projections of solids in various orientations using CAD software.						
5.	<b>Construct</b> isometric views and isometric projections of simple Machine parts using CAD software.						

#### **CO-PO – PSO Mapping**

CO		PO									PSO			
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	2	2			3			1		2		1		
CO2	2	2			3			1		2		1		
CO3	2	2			3			1		2		1		
CO4	2	2			3			1		2		1		
CO5	2	2			3			1		2		1		

Correlation levels 1:

1: Slight (Low)

2: Moderate (Medium)

3: Substantial (High)

#### SYLLABUS

#### UNIT I: COMPUTER AIDED DRAFTING

Introduction, Applications, CAD software- AutoCAD, GUI, function keys, Drawing entities, Drafting aids(limits, layers, dimensioning, object snap, zoom), modify commands, Block, WBlock and insert, List of commands, Setting Isometric mode, Isoplanes, isometric commands.

#### Weekly Exercises:

Week 1: a) Limits, command line, command list, function keys- Ortho, polar, Osnap, Otrack etc.

- b) Draw lines using dynamic input, Ortho & Polar, Line divide, construction line.
- c) Drawings using coordinate system, arbitrary coordinate system.
- d) Selection & Modify commands offset, move, copy, rotate, trim, Scale.
- Week 2: a) Layers, Match property, line types
  - b) Arcs and Circles
  - c) Fillet and Chamfer
  - d) Annotations and Dimensioning
- Week 3: a) Symmetrical drawings using mirror
  - **b**) Rectangular Array
  - c) Polar and Path Array
  - d) Annotations and Dimensioning
- Week 4: a) polygons
  - **b**) hatching
  - c) block, wblock, group, ungroup, explode
  - **d**) iso planes

#### **UNIT II: ORTHOGRAPHIC PROJECTIONS – POINTS & LINES**

Orthographic projections – projections of points – projections of straight lines (lines parallel to both HP&VP, lines parallel to one and inclined to other, lines inclined to both the planes)

#### Weekly Exercises:

Week 5: a) Projection of points

- b) Shortest distance of points from principle plane
- Week 6: a) A line parallel to both the planes
  - b) A line inclined one plane
  - c) A line inclined to both the planes

#### **UNIT III: ORTHOGRAPHIC PROJECTIONS – PLANES**

Projections of regular polygon planes - inclined to one plane, inclined to both the planes.

#### Weekly Exercises:

Week 7: Projection of plane inclined to one plane.

Week 8: Projection of planes inclined to both planes

### **UNIT IV: ORTHOGRAPHIC PROJECTIONS – SOLIDS**

Projection of solids: Prisms – Cylinder– Pyramids & Cones –simple positions & axis inclined to one plane.

#### Weekly Exercises:

Week 9: Projection of solids in simple positions.

Week 10: Projection of solids inclined to one plane.

#### **UNIT V: ISOMETRIC PROJECTIONS**

Isometric projections –Isometric scale, Isometric view & projection of prisms, pyramids, cone, cylinder, sphere, and their combination, conversion of orthographic projection into isometric projection and vice-versa of simple machine parts.

#### Weekly Exercises:

Week 11: Iso-Ortho conversions of simple machine parts.

Week 12: Ortho-Iso conversions of simple machine parts.

APPLIED PHYSICS LAB							
Course Code: 23PY1201	Credits: 1.5						
Instruction: L - 0, T- 0 P – 3	Sessional Marks: 50						
End Exam : 3 Hours	End Exam Marks :50						

#### **Course Objectives:**

To enable the students to acquire skill, technique and utilization of the Instruments

#### **Course Outcomes:**

At the end of this course, the students will be able to

	COURSE OUTCOMES
CO-1	Apply the theoretical knowledge as working principles of Laboratory experiments
	related to Optics, Mechanics, Electromagnetic and Electronics. (L3)
CO-2	Adopt the experimental procedure to perform the experiments for Data
	procurement / Acquisition. (L3)
CO-3	<b>Compute</b> the required parameters by suitable formula using experimental values
	(observed values) in Mechanics, Optics, Electromagnetic and Electronics. (L3)
CO-4	Analyze the experimental data and obtain the results through graphical
	interpretation. (L4)
CO-5	Perform effectively as an individual or as a team and be Accountable /
	Responsible to the work rendered. (L4)

#### **CO-PO Mapping:**

		Program Outcomes (POs)					PSOs							
	Domain Specific POs			Domain Specific POs Domain Independent POs				r9	08					
COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3				1	2						3		
CO2		2	1											
CO3				2				1						
CO4	1			3								1		
CO5								2	3	1	2			

#### List of experiment (any eight to ten experiments have to be completed)

- 1. Estimation of thickness of a thin paper by forming parallel interference fringes-Wedge method.
- 2. Newton's rings- determination of radius of curvature of a convex lens
- 3. Find out the wavelengths of spectral lines in mercury spectrum-using diffraction grating in normal incidence position.

- 4. Evaluation of refractive indices o-ray and e-ray in quartz crystal (double refraction)
- 5. Calculation of Cauchy's constants of the material of the prism using spectrometer.
- 6. Determination of band gap of semiconductor (thermistor) by varying resistance with temperature
- 7. Verification of laws of resistance and determination of specific resistance of wire by using Carey- Foster's bridge.
- 8. Calibration of a low-range voltmeter using potentiometer.
- 9. Study of variation of magnetic field along the axis of a current carrying circular coil Stewart and Gee's apparatus
- 10. Determination of the frequency of an electrically maintained tuning fork Melde's experiment.
- 11. Evaluation of moment of inertia by using Flywheel
- 12. Estimation of rigidity modulus and moment of inertia using Torsional pendulum
- 13. Determination of the particle size of micro particles (lycopodium powder) using laser diffracting grating.
- 14. Find the Numerical aperture of a given optical fiber
- 15. Determination of the velocity of ultrasound in liquids by using the phenomenon of diffraction of light by ultrasound
- 16. Estimation of the wavelength of diode laser using a transmission grating
- 17. Determination of dielectric constant by variation of temperature method (Piezoelectric crystal)
- 18. Magnetic Hysteresis curve experiment (B-H curve)
- 19. V-I characteristics of Semiconductor diode.

#### **Learning Outcomes:**

#### The students will be able to

- Handle optical instruments like microscope and spectrometer
- **Determine** thickness of a hair/paper with the concept of interference
- **Estimate** the wavelength and resolving power of different colours using diffraction grating
- **Plot** the intensity of the magnetic field of circular coil carrying current with varying distance
- **Determine** the band gap of a given semiconductor

- Evaluate the acceptance angle of an optical fiber and numerical aperture
- **Determine** resistance and resistivity of the given material
- Plot the accuracy / correction of low range voltmeter using potentiometer
- Evaluate the refractive index using double refraction phenomena
- **Determine** frequency of electrically maintained tuning fork
- **Evaluate** the loss of energy in magnetic materials

#### **Prescribed Book**

PROGRAMMING WITH C LAB				
CODE:23CM3202	Credits:1.5			
Instruction : 3 Periods /Week	Sessional Marks : 50			
End Exam : 3 Hours	End Exam Marks : 50			

Pre requisite: Concepts of Problem Solving & Computer Programming in C

#### **Course Objective:**

• The course aims at translating given algorithms to a working and valid program

#### **Course Outcomes:**

After	After completion of this course, a student will be able to:		
CO1	Develop C programs using operators		
CO2	Implement C programs using conditional structures		
CO3	Implement C programs using iterative structure arrays and strings		
CO4	CO4 Inscribe C programs that use Pointers to and functions		
CO5	O5 Develop a c program for implementing user defined types and file processing		

# **SYLLABUS**

# MINIMUM SET OF SAMPLE PROGRAMS

# 1. CONVERTING MILES TO KILOMETERS

**PROBLEMSTATEMENT:** Your summer surveying job requires you to study some maps that give distances in kilometers and some that use miles. You and your coworkers prefer to deal in metric measurements. Write a program that performs the necessary conversion.

**Problem Input:** miles /\* the distance in miles\*/ **Problem Output:** kms /\* the distance in kilometers \*/ **Relevant Formula:** 1 mile = 1.609 kilometers

Design algorithm, flow chart ,program using the above data requirements for the given problem. Try the sample test cases given below :

SAMPLE TEST CASES	INPUT	OUPUT
Test case 1	10	16.09
Test case 2	2	3.218

# 2. SUPERMARKET COIN PROCESSOR

**PROBLEM STATEMENT:** You are drafting software for the machines placed at the front of supermarkets to convert change to personalized credit slips. In this draft, the user will manually

enter the number of each kind of coin in the collection, but in the final version, these counts will be provided by code that interfaces with the counting devices in the machine.

### **Problem Inputs**

char first, middle, last /* a customer's initials */int				
dollars	/* number of dollars */			
int quarters	/* number of quarters	*/ int		
dimes	/* number of dimes	*/		
int nickels	/* number of nickels	*/		
int pennies	/* number of pennies	*/		
Problem Outputs				
inttotal_dollars	/* total dollar value	*/		
int change	/* leftover change	*/		
Additional Program Variables inttotal_cents				
0	/* total walks in some	*/		

/\* total value in cents \*/

Design algorithm, flow chart ,program using the above data requirements for the given problem Try the sample test cases given below :

# **TESTING TIP :**

To test this program, try running it with a combination of coins that yield an exact dollar amount with no leftover change. For example, 1 dollar, 8 quarters, 0 dimes,35 nickels, and 25 pennies should yield a value of 5 dollars and 0 cents. Then increase and decrease the quantity of pennies by 1 (26 and 24 pennies) to make sure that these cases are also handled properly.

SAMPLE TEST CASES	INPUT	OUPUT
Test case 1	Type in your 3 initials and press return> JRH JRH, please enter your coin information. Number of \$ coins > 2 Number of quarters> 14 Number of dimes > 12 Number of nickels > 25 Number of pennies > 131	JRH Coin Credit Dollars: 9 Change: 26 cents
Test case 2	Type in your 3 initials and press return> JRH JRH, please enter your coin information.Number of \$ coins > 3Number of quarters> 12Number of dimes > 14Number of nickels > 50Number of pennies > 175	JRH Coin Credit Dollars: 11 Change: 26 cents

# **<u>3. WATER BILL PROBLEM</u>**

**PROBLEM STATEMENT :**Write a program that computes a customer's water bill. The bill includes a \$35 water demand charge plus a consumption (use) charge of \$1.10 for every thousand gallons used. Consumption is figured from meter readings (in thousands of gallons) taken recently and at the end of the previous quarter. If the customer's unpaid balance is greater than zero, a \$2 late charge is assessed as well.

#### **Problem Constants**

DEMAND\_CHG 35.00 /\* basic water demand charge \*/ PER\_1000\_CHG 1.10 /\* charge per thousand gallons used\*/ LATE\_CHG 2.00 /\* surcharge on an unpaid balance \*/ **Problem Inputs** int previous /\* meter reading from previous quarter in thousands of gallons \*/ int current /\* meter reading fromcurrent quarter \*/ \*/ double unpaid /\* unpaid balance of previous bill **Problem Outputs** double bill /\* water bill \*/ doubleuse\_charge /\* charge for actual water use \*/ doublelate\_charge /\* charge for nonpayment of part of previous balance \*/ **Relevant Formulas** 

water bill = demand charge + use charge + unpaid balance+ applicable late charge

Design algorithm , flow chart ,program using the above data requirements for the given problem Try the sample test cases given below :

SAMPLE TEST CASES	INPUT	OUPUT
Test case 1	<ul> <li>This program figures a water bill based on the demand charge</li> <li>(\$35.00) and a \$1.10 per 1000 gallons use charge.</li> <li>A \$2.00 surcharge is added to accounts with an unpaid balance.</li> <li>Enter unpaid balance, previous and current meter readings on separate lines after the prompts. Press <return> or</return></li> <li><enter> after typing each number.</enter></li> <li>Enter unpaid balance&gt; \$71.50</li> <li>Enter previous meter reading&gt; 4198</li> <li>Enter current meter reading&gt; 4238</li> </ul>	Bill includes \$2.00 late charge on unpaid balance of \$71.50 Total due = \$152.50
Test case 2	<ul> <li>This program figures a water bill based on the demand charge</li> <li>(\$35.00) and a \$1.10 per 1000 gallons use charge.</li> <li>A \$2.00 surcharge is added to accounts with an unpaid balance.</li> <li>Enter unpaid balance, previous and current meter readings on separate lines after the prompts. Press <return> or</return></li> <li><enter> after typing each number.</enter></li> <li>Enter unpaid balance&gt; \$51</li> <li>Enter previous meter reading&gt; 4198</li> <li>Enter current meter reading&gt; 4137</li> </ul>	Bill includes \$2.00 late charge on unpaid balance of \$71.50 Total due = \$102.00

# **<u>4.</u>** PRIME NUMBER

**PROBLEM STATEMENT:** Given a positive integer **N**, calculate the sum of all prime numbers between **1** and

N(inclusive).

#### Input:

The first line of input contains an integer  $\mathbf{T}$  denoting the number of test cases. T test cases follow. Each test case contains one line of input containing  $\mathbf{N}$ .

#### **Output:**

For each test case, in a new line, print the sum of all prime numbers between 1 and N.

#### **Constraints:**

 $\begin{array}{l} 1 \leq T \leq 100 \\ 1 \leq N \leq 10^6 \end{array}$ 

Design algorithm, flow chart ,program using the above data requirements for the given problem Try the sample test cases given below :

SAMPLE TEST CASES	INPUT	OUPUT	
Test case 1	2	10	
	5	17	
	10		
Test case 2	2	17	
	7	17	
	10		

# 5. BUBBLE SORT

**PROBLEM STATEMENT :**The task is to complete bubble function which is used to implement Bubble Sort

#### Input:

First line of the input denotes the number of test cases 'T'. First line of the test case is the size of array and second line consists of array elements.

#### **Output:**

Sorted array in increasing order is displayed to the user.

#### **Constraints:**

1 <=T<= 100 1 <=N<= 1000 1 <=arr[i]<= 1000

Design algorithm , flow chart ,program using the above data requirements for the given problem Try the sample test cases given below :

SAMPLE TEST CASES	INPUT	OUPUT
Test case 1	2	13479
	5	1 2 3 4 5 6 7 8 9 10
	41397	
	10	
	10 9 8 7 6 5 4 3 2 1	
Test case 2	1	02389
	5	
	89320	

# <u>6.</u> TEXT EDITOR

**PROBLEM STATEMENT:** Design and implement a program to perform editing operations on a line of text. Your editor should be able to locate a specified target substring, delete a substring, and insert a substring at a specified location. The editor should expect source strings of lessthan 80 characters.

Problem Constant MAX\_LEN 100 /\* maximum size of a string \*/

### **Problem Inputs**

char source[MAX\_LEN] /\* source string \*/

char command /\* edit command \*/

# **Problem Output**

char source[MAX\_LEN] /\* modified source string \*/

Design algorithm, flow chart, program using the above data requirements for the given problem Try the sample test cases given below :

SAMPLE TESTCASES	INPUT	OUPUT
Test case 1	Enter the source string: > Internet use is growing rapidly. Enter D(Delete), I(Insert), F(Find), or Q(Quit)> d String to delete> growing	New source: Internet use is rapidly
Test case 2	Enter D(Delete), I(Insert), F(Find), or Q(Quit)> F String to find>.	'.' found at position 23

# 7. ARITHMETIC WITH COMMON FRACTIONS

**PROBLEM STATEMENT:** You are working problems in which you must display your results as integer ratios; therefore, you need to be able to perform computations with common fractions and get results that are common fractions in reduced form. You want to write a program that will allow you to add, subtract, multiply, and divide several pairs of common fractions.

Design algorithm, flow chart, program using the above data requirements for the given problem Try the sample test cases given below :

SAMPLE TESTCASES	INPUT 1	OUPUT
Test case 1	Enter a common fraction as two integers separated by a slash> 3/-4	Input invalid— denominator must be positive
Test case 2	Enter a common fraction as two integers separated by a slash> 3/4 Enter an arithmetic operator (+,-,*, or /) >+ Enter a common fraction as two integers separated by a slash> 5/8 Entering find_gcd with n1 = 44, n2 = 32 Do another problem? (y/n)>n	gcd of 44 and 32?> 4 find_gcd returning 4 3/4 + 5/8 = 11/8

# **<u>8.</u>** FACTORIAL OF A NUMBER

**PROBLEM STATEMENT:** Find factorial of a given number n.

Design algorithm , flow chart ,program using the above data requirements for the given problem Try the sample test cases given below :

SAMPLE TESTCASES	INPUT 1	OUPUT
Test case 1	Enter a number to find factorial>2	Factorial of 2 is 4
Test case 2	Enter a number to find factorial>3	Factorial of 3 is 6

**<u>9.</u> COLLECTING AREA FOR SOLAR-HEATED HOUSE – FILES AND FUNCTIONS PROBLEM STATEMENT :** An architect needs a program that can estimate the appropriate size for the collecting area of a solar-heated house. Determining collecting area size requires consideration of several factors, including the average number of heating degree days for the coldest month of a year (the product of the average difference between inside and outside temperatures and the number of days in the month), the heating requirement per square foot of floor space, the floor space, and the efficiency of the collection method. The program will have access to two data files. File hdd.txt contains numbers representing the average heating degree days in the construction location for each of 12 months. File solar.txt contains the average solar insolation(rate in BTU/day at which solar radiation falls on one square foot of a given location)for each month. The first entry in each file represents data for January, the second, data for February, and so on.

\*/

#### **Problem Inputs**

Average heating degree days file Average

solar insolation file

heat\_deg\_days /\* average heating degree days for coldest month \*/ coldest\_mon /\* coldest month (number 1 .. 12) \*/ solar\_insol /\* average daily solar insolation (BTU/ft^2)for coldest month heating\_req /\* BTU/degree day ft^2 for planned type construction\*/

efficiency /\* % of solar insolation converted to usable heat \*/

floor space /\* square feet \*/

# Program Variables

energy\_resrc /\* usable solar energy available in coldest month (BTUs obtained from 1 ft^2 of collecting area) \*/

# **Problem Outputs**

heat\_loss /\* BTUs of heat lost by structure in coldest month \*/ collect\_area /\* approximate size (ft^2) of collecting area needed\*/ The formula for approximating the desired collecting area (A) is:

#### A= heat loss / energy resource

Design algorithm , flow chart ,program using the above data requirements for the given problem Try

the sample test cases given below :

SAMPLE TESTCASES	INPUT	OUPUT
Test case 1	What is the approximate heating requirement (BTU / degree day ft^2) of this type of construction?	To replace heat loss of11350800 BTU in the coldest month (month 12) with available solar insolation of 500 BTU / ft^2 / day, and an

	=>9 What percent of solar insolation will be converted to usable heat? => 60 What is the floor space (ft^2)? => 1200	efficiency of 60 percent, use a solar collecting area of 1221 ft <sup>2</sup> .
Test case 2	What is the approximate heating requirement (BTU / degree day ft^2) of this type of construction? =>10 What percent of solar insolation will be converted to usable heat? => 60 What is the floor space (ft^2)? => 1200	To replace heat loss of 12612000 BTU in the coldest month (month 12) with available solar insolation of 500 BTU / ft <sup>2</sup> / day, and an efficiency of 60 percent, use a solar collecting area of 1221 ft <sup>2</sup> .

# **Q10. UNIVERSAL MEASUREMENT CONVERSION**

**PROBLEM STATEMENT:** Design a program that takes a measurement in one unit (e.g., 4.5 quarts) and converts it to another unit (e.g., liters). For example, this conversion request 450 km miles would result in this program output Attempting conversion of 450.0000 km to miles 450.0000 km = 279.6247 miles.

The program should produce an error message if a conversion between two units of different classes (e.g., liquid volume to distance) is requested. The program should take a database of conversion information from an input file before accepting conversion problems entered interactively by the user. The user should be able to specify units either by name (e.g., kilograms) or by abbreviation (e.g., kg).

# Structured Data Type unit tmembers :

# **Problem Output**

Message giving conversion.

### *Data file* units.txt:

Duiu jiit u	museuxue			
miles	mi	distance	1609	9.3
kilometers	km	distance	1	000
yards	yd	distance	0.91	44
meters	m	distance	1	
quartsqtliqu	uid_volum	ne 0.94635		
liters	1 1	iquid_volume	e 1	
gallons	gal	liquid_volu	ime	3.7854
milliliters	ml	liquid_vol	ume	0.001
kilograms	kg	mass	1	
grams	g	mass	0.001

poundslb	mas	s 0.435	92	

Design algorithm, flow chart, program using the above data requirements for the given problem Try the sample test cases given below :

SAMPLE TEST CASES	INPUT 1	OUPUT
Test case 1	Enter a conversion problem or q to quit. To convert 25 kilometers to miles, you would enter > 25 kilometers miles or, alternatively, > 25 km mi	>450 km miles Attempting conversion of 450.0000 km to miles 450.0000km = 279.6247 miles
Test case 2	Enter a conversion problem or q to quit. > 2.5 qt 1 Attempting conversion of 2.5000 qt to 1 2.5000qt = 2.3659 1 Enter a conversion problem or q to quit.	<ul> <li>&gt; 100 meters gallons</li> <li>Attempting conversion of</li> <li>100.0000 meters to gallons</li> <li>Cannot convert meters</li> <li>(distance) to gallons</li> <li>(liquid_volume)</li> </ul>

#### ADDITIONAL PROGRAMS Problem solving programs:

- 1. **Chocolate feast :** Little Bob loves chocolates, and goes to a store with \$N in his pocket. The price of each chocolate is \$C. The store offers a discount: for every M wrappers he gives to the store, he gets one chocolate for free. How many chocolates does Bob get to eat? Note : Evaluate the number of wraps after each step. Do this until you have enough wraps to buy new chocolates.
- 2. **Angry Professor :**The professor is. Given the arrival time of each student, your task is to find out if the class gets cancelled or conducting a course on Discrete Mathematics to a class of N students. He is

angry at the lack of their discipline, and he decides to cancel the class if there are less than K students present after the class startsnot.

- 3. **Divisible Sum Pairs :** You are given an array of n integers and a positive integer, k. Find and print the number of (i,j) pairs where i < j and ai + aj is evenly divisible by k.
- 4. Sherlock And Valid String: A —valid string is a string S such that for all distinct characters in S each such character occurs the same number of times in S. Note :The logic of the solution is as follows: count the character counts for each character. Note : if they are all equal it means that all characters occur exactly N times and there is no removal needed .if 2 or more have less or more characters there is no way to fix the string in just 1 removal . if exactly 1 char has a different count than all other characters remove this char completely and S is fixed.
- 5. **Ice Cream Parlor :**Sunny and Johnny together have M dollars they want to spend on ice cream. The parlor offers N flavors, and they want to choose two flavors so that they end up spending the whole amount. You are given the cost of these flavors. The cost of the ith flavor is denoted by ci. You have to display the indices of the two flavors whose sum is M.
- 6. **'Missing Numbers' :**Numeros, the Artist, had two lists A and B, such that B was a permutation of A. Numeros was very proud of these lists. Unfortunately, while transporting them from one exhibition to another, some numbers from A got left out. Can you find the numbers missing?
- 7. Alternating Characters: John likes strings in which consecutive characters are different. For example, he likes ABABA, while he doesn't like ABAA. Given a string containing characters A and B only, he wants to change it into a string he likes. To do this, he is allowed to delete the characters in the string.
- 8. **Game Of Thrones :** I : Dothraki are planning an attack to usurp King Robert's throne. King Robert learns of this conspiracy from Raven and plans to lock the single door through which the enemy can enter his kingdom door. But, to lock the door he needs a key that is an anagram of a palindrome. He starts to go through his box of strings, checking to see if they can be rearranged into a palindrome.For example, given the string ,s=[aabbccdd] one way it can be arranged into a palindrome is abcddcba.
- 9. Life and everything : Your program is to use the brute-force approach in order to find the Answer to Life, the Universe, and Everything. More precisely... rewrite small numbers from input to output. Stop processing input after reading in the number 42. All numbers at input are integers of one or two digits.

input: 1 2 23 22 42

output: 1 2 23 22

10. **Filling Jars :**Animesh has N empty candy jars, numbered from 1 to N, with infinite capacity. He performs M operations. Each operation is described by 3 integers a, b and k. Here, a and b are indices of the jars, and k is the number of candies to be added inside each jar whose index lies between and b (both inclusive). Can you tell the average number of candies after M operations?

# **Instructions to the instructor:**

This lab course consists of two set of programs

- 1) Minimum set of sample programs
- 2) Additional set of programs

Minimum set of sample programs are designed unit wise covering all the topics in the theory. Additional set of programs are designed basing on problem solving

# Sessional marks : 50 marks

- 1) Daily Evaluation (Includes Record, Observation & regular performance) 30 marks
- 2) Attendance 5 marks
- 3) Internal Exam 10 marks
- 4) Viva Voce 5 marks

# **Daily Evaluation (30 marks)**

- Every Student must execute minimum set of sample programs to secure 60% of marks in Daily Evaluation i.e. 18 Marks and to appear in external examination.
- In addition to that if a student finishes the minimum set and 5 programs from additional set of programs would secure 80% of marks in Daily Evaluation i.e. 24 Marks.
- If a student finishes all the programs in both the set s will secure 100% of marks in Daily Evaluation

#### Internal Exam (10 marks)

- Every student is given 4 questions in the internal exam out of which the difficulty level of 2 questions is easy / medium and 2 questions of difficulty level is high
- Each easy / medium level question carries 20% of marks and difficulty level question carries 30% of marks

# External Exam (50 marks)

- Viva voce 10 marks
- Write up + Execution 40 marks

# Write up + Execution (40 marks)

- Every student is given 4 questions in the external exam out of which the difficulty level of 2 questions is easy / medium and 2 questions of difficulty level is high
- Each easy / medium level question carries 30% of marks and difficulty level question carries20% of marks.

Engineering and IT Workshop								
CODE: 23ME3202	Credits: 1.5							
Instruction : 3 Practical/Week	Sessional Marks : 50							
End Exam : 3 Hours	End Exam Marks : 50							

# (CHEM, CSD, CSM, EEE, IT)

#### Prerequisites: Nil

#### **Course Objectives:**

- 1. To provide training and hands on experience to the students on basic Engineering relatedskills like carpentry, fitting, tin smithy and house wiring
- 2. Explain the internal parts of a computer, peripherals, I/O ports, connecting Cables.
- 3. Demonstrate OS installation and Hardware Troubleshooting.
- 4. Demonstrate Office Tools such as Word processors, Spread-sheets, and Presentation.

#### **Course Outcomes:**

By the end of the course, students will be able to

Produce a variety of carpentry, fitting and Tin Smithy jobs.
 Prepare electrical circuits for Series & Parallel connection and Stair case wiring.
 Demonstrate the capability of OS installation, network connectivity and Hardware Troubleshooting
 Draft, present and perform analyses on a given problem using MS-office tools

CO-PO –PSO Mapping																	
CO		PO													PSO		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3		
CO1	1	2						1									
CO2	1	2						1									
CO3	1	2		2				1	1								
CO4	1	3			1			1	1	2		2					

### **CO-PO – PSO Mapping**

Correlation levels 1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High)

#### **ENGINEERING WORKSHOP SYLLABUS** LIST OF EXPERIMENTS

Carpentry	1. Cross Lap Joint
	2. Dovetail Joint
Fitting	1. V Fit
	2. Square Fit
Tin Smithy	1. Taper Tray
	2. Square Box without lid
House Wiring	1. Parallel / Series Connection of three bulbs
	2. Stair Case wiring
<b>Reference book</b>	:

- 1. S.K.Hajra Choudhury "Elements of Workshop Technology" Vol I Manufacturing Processes, ISBN:8185099146(2017).
- 2. Lab Manual

#### **IT WORKSHOP SYLLABUS**

#### Week 1: Introduction to PC Hardware

Types of Computing Devices such as PC, Laptops, Servers, Smart Phones, Tablets, other accessories, PC parts, Input/Output devices, I/O ports and interfaces, main memory, cache memory and secondary storage technologies, digital storage basics, networking components and speeds.

#### Week 2:

Task 1: OS Installation: Every student should individually install operating system like Linux or MS windows on the personal computer. The system should be configured as dual boot with both windows and Linux.

Task 2: Hardware Troubleshooting: Students have to be given a PC which does not boot due to improper assembly or defective peripherals. They should identify the problem and fix it to get the computer back to working condition.

Week 3:

Task 1: Orientation & Connectivity Boot Camp: Students should get connected to their Local Area Network and access the Internet. In the process they configure the TCP/IP setting. Finally students should demonstrate how to access the websites and email.

Task 2: Web Browsers, Surfing the Web: Students customize their web browsers with the LAN proxy settings, bookmarks, search toolbars and pop-up blockers.

#### Week 4: MS word & PowerPoint Presentation

Task 1: Creating a Newsletter: Features to be covered: - Table of Content, Newspaper columns, Images from files and clipart, Drawing toolbar and Word Art, Formatting Images,

# **CO3**

**CO3** 

**CO3** 

**CO4** 

#### Textboxes, Paragraphs in word.

**Task 2: create basic power point presentation:** PPT Orientation, Slide Layouts, Inserting Text, Formatting Text, Bullets and Numbering, Auto Shapes, Lines and Arrows, Hyperlinks, Inserting Images, Tables and Charts.

#### Week 5: Spreadsheet Orientation:

#### **CO4**

Accessing, overview of toolbars, saving spreadsheet files, Using help and resources. Format Cells, Summation, auto fill, Formatting Text. Calculating GPA -. Features to be covered: - Cell Referencing, Formulae in spreadsheet – average, std. deviation, Charts, Renaming and Inserting worksheets, Hyper linking, Count function, Sorting, Conditional formatting.

#### **Case Study:**

- 1. Create Department Newsletter of Latest academic year.
- 2. Create a presentation on short term goals vs long term goals.
- 3. Perform result analysis

#### **Reference Books:**

- 1. PC Hardware A Handbook Kate J. Chase PHI (Microsoft)
- 2. MOS Study Guide for Microsoft Word, Excel, Power point & Outlook by Joan Lambert & Joyce Cox

UNIVERSAL HUMAN VALUES & ETHICS								
Code: 23CM0101	Credits: 1							
Instruction : 1 Period	Sessional Marks: 100							
End Exam :	End Exam Marks:							

#### **Prerequisites:**

• No prerequisites.

#### **Course Objectives:**

The objective of the course is to enable the student in

- 1. Development of a holistic perspective based on self-exploration about him/her (human being), family, society and nature/existence.
- 2. Understanding (or developing clarity) of the harmony in the human being, family, society and nature/existence
- 3. Strengthening of self-reflection.
- 4. Development of commitment and courage to act.

#### **Course Outcomes:**

By t	By the end of the course, the student will be able to:							
1	Articulate Basic human aspirations and requirements for their fulfilment and identify the Role and process of Value education							
2	Articulate the needs and activities of the self and body and frame program for self-regulation and health for harmony of the self.							
3	Recognize the value of Relationship and the nine feelings in Relationship for fulfilment of relationship for harmony in the family.							
4								
	Nature.							
5	Identify the nature of existence and the role of human being for harmony in existence.							

#### Mapping of Course Outcomes with Program Outcomes:

CO	РО											PSO		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
1	-	_	-	-	-	2	2	3	-	-	_	2	2	2
2	-	-	-	-	-	-	-	3	-	-	-	2	-	-
3	-	_	-	_	-	-	-	3	1	_	-	2	-	-
4	-	_	-	_	-	2	3	3	2	_	-	2	2	2
5	-	-	-	-	-	-	2	3	I	-	-	2	2	-

#### **SYLLABUS**

**Introduction – Fulfillment of Basic Human Aspirations:** Need for value education – Process of Value Education – Self-Exploration – Its content and process – Natural Acceptance and Experiential Validation – Basic Human Aspirations – Basic requirements for fulfillment of aspirations.

**Harmony in the Self:** Human being as co-existence of Self and Body - Needs of Self and Body – Distinguishing Self and Body –Imaginations and its sources – Self-organized /Enslaved behavior - Harmony of the Self and body.

**Harmony in the Family:** Human relationship – Feelings in Relationship – Trust – Intention and competence – Respect as right evaluation– Other feelings in Relationship – Love.

**Harmony in the Nature:** Four Orders of Nature – Characteristics of the four orders – Mutually fulfilling interaction - Understanding the harmony in the Nature.

**Universal Human Values and Ethical Human Conduct:** Natural acceptance of human values - Definitiveness of Ethical Human Conduct - Humanistic Constitution and Humanistic Universal Order.
